PRESS RELEASE

April 2009 – For Immediate release

FRONTRUNNER WELCOMES GUESTS

Frontrunner Plus, part of the Frontrunner entrance flooring system, has been installed at the main entrance to a new Greek hotel complex. It was selected for its proven reputation in heavy foot traffic situations where problem-free and effective cleaning needs to be combined with cost effectiveness, reduced maintenance and an attractive appearance.

Frontrunner Plus is manufactured with integral absorbent inserts within a heel-proof vinyl grid. This unique combination scrapes, cleans and dries the shoes of the hotel guests while any dirt remaining falls through the grid and is not transferred inside. This dramatically reduces the ingress of dirt, dust and other contaminants and thereby enhances appearance and reduces maintenance in the hotel foyer.

The entrance matting was trimmed from a roll, easily on site to fit, such as within the revolving doors or shaped matwells, where as other entrance matting, especially aluminum ones, would require templating in advance and shipping of large awkward to handle panels. Frontrunner's unique flexibility means it will contour over uneven or rough surfaces, while remaining stable underfoot, and is easily lifted for cleaning and removal of dirt. Other external options are Frontrunner XT with extra surface grip and Frontrunner Brush with nylon brush inserts to combat severe soiling together with Frontrunner 100% grid vinyl without the absorbent inserts for internal/external use.

Samples and Frontrunner Entrance Flooring System brochure are available from Plastic Extruders Ltd (tel 01268 571116) or visit www.frontrunnerplus.com
